

THINK YOU'RE COVERED?

Rethinking Mobile Compliance in 2025

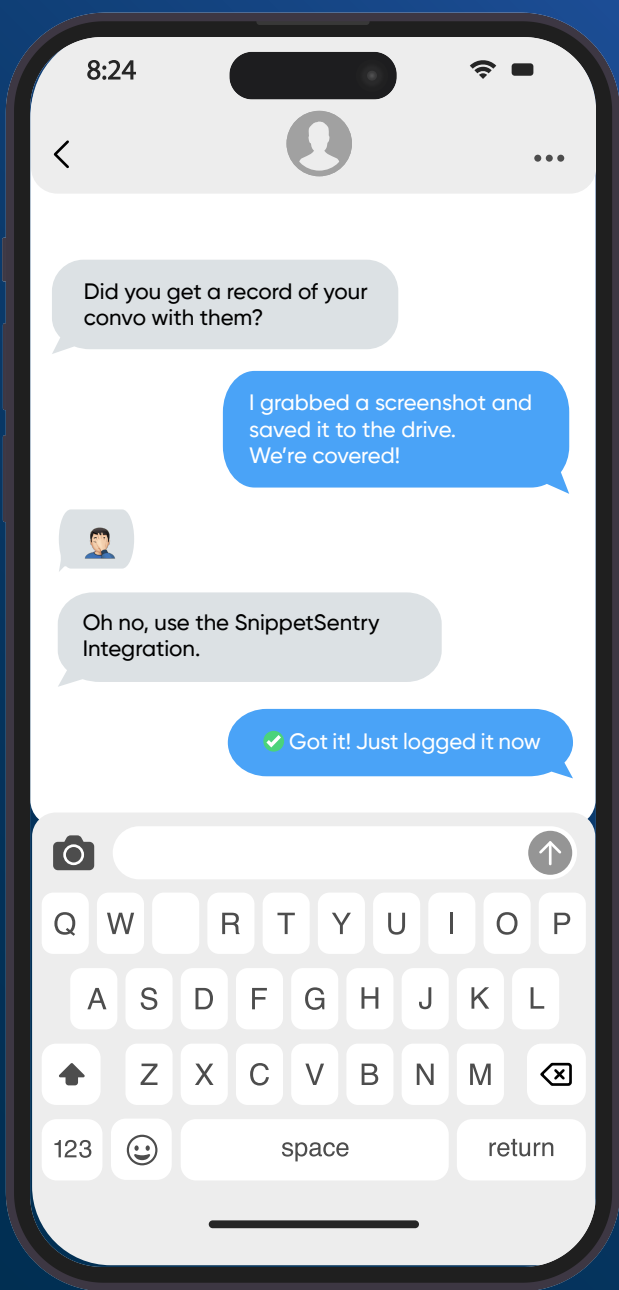

Secure • Audit-Ready • Native Capture

Uncover the blind spots legacy tools leave behind
—and what resilient compliance requires today.

When the Tools You Trusted Miss the Mark

For years, compliance teams leaned on third-party mobile archiving apps to check the regulatory box. But a recent high-profile breach proved what insiders have long suspected: compliance theater isn't compliance.

These Tools Often:

- ✗ Rely on manual log-ins or employee behavior
- ✗ Miss native SMS/iMessage threads entirely
- ✗ Offer weak audit trails or unreliable exports

When mobile capture fails—whether due to technical gaps or silent breakdowns—**the legal and reputational fallout can be severe.**

The tools checked the box—until the regulators checked the tools.

Modern compliance isn't passive. It requires built-in integrity, live monitoring, and reliable recovery.

The New Standard: Resilient, Built-In, Battle-Tested

What does it mean to be truly “compliance-ready” in today’s landscape? It means:

Requirement	Legacy Archiving App	Native Capture with SnippetSentry
SMS/iMessage Capture	Often incomplete or unreliable	Full native mobile capture (no app switch)
Channel Health Monitoring	Manual or missing	Always-on integrity checks
Disaster Recovery Readiness	Rarely included	Built-in, validated, and tested
Legal Export / Audit Trail	Error-prone	Court-ready records with chain of custody

Today’s regulators aren’t just asking if you archive—they’re asking how reliably you can prove it.

Built for What Comes Next

SnippetSentry isn't just another archiving app. It's an enterprise-grade compliance engine that keeps your mobile messaging secure, searchable, and regulator-ready.

What Sets Us Apart:

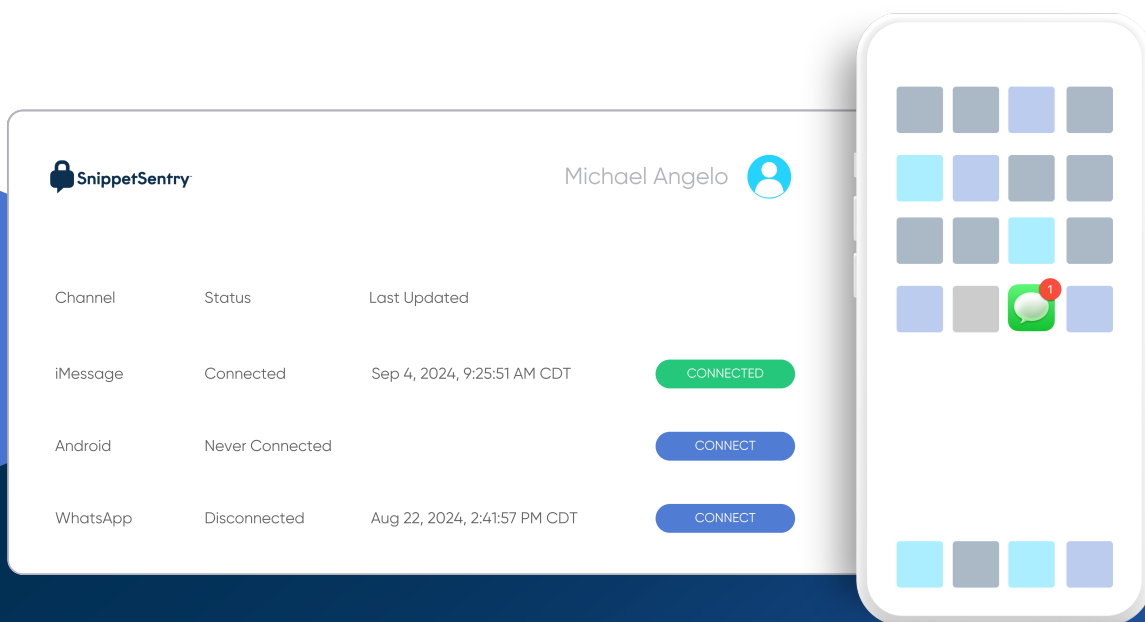

True native capture
(no app-switching,
no blind spots)

**Live channel health
monitoring** to
prevent silent failures

**Legal-grade audit
trails** with defensible
exports
